

Maral Ucar
Turkey

The first workshop, we were blindfolded and were asked to complete a path blindfolded, by following a rope with our hands. There were ~~multiple~~ multiple objects hanging on the rope and we were asked to recognize by our hands, by only touching. After we were done, we sketched the path we walked and listed the objects ~~hanging~~ hanging on the rope, ~~in the~~ in the 2nd workshop, a guy from a rescuing team presented a slideshow he made. The presentation was about their rescuing team, about how they rescue people, ~~when~~ when they use rescuing dogs and helicopters, how they founded the foundation etc. ~~The second workshop~~ In the third workshop, we watched their rescuing dog find a person. The volunteer from the foundation informed ~~us~~ us about their rescuing dog evi; about her age, her breed etc. The fourth workshop was using the apps we downloaded earlier. We used the app "Locus Map" It's an app that saves the paths you take on a digital map, on your location in the real world. We walked around with the phone in our hand. When we checked the app after a while, we saw that it ~~tracked~~ tracked our location and saved it. ~~I learned~~ I learned how to track your location on a ~~digital~~ digital app, what to do / what numbers to call if you ever get stuck on a mountain, how rescuing dogs are trained, flip the page over

how to ~~see~~ perceive the world around you without
your seeing sense, how to ~~continue~~ continue ~~moving~~
moving forward without using your eyes etc. They were
all very fun and beneficial at the same time.
